

Twinning Kit

iO-TWIN

The Twinning Kit is designed to allow a single thermostat to control two identical HVAC units. It can also be expanded to control a total of four HVAC units. The iO-TWIN can be used on common or separate ducted systems with single-stage, multi-stage or heat pump equipment. Only standard 18-gauge thermostat wire is required. Thermostats and HVAC units can be located up to 300' from the twinning kit panel.

Features and Benefits:

- Easy to install and setup
- Uses standard 18-gauge thermostat wire
- Optional control of up to four units
- Reduces installation time and cost
- Can be used with the Lead/Lag Controller

Warranty: 5 years
